

TRITONE ANALYTICS

Letter of Recommendation

Date: February 28, 2026

To Whom It May Concern,

Keshav Sharma, who worked with us at Tritone Analytics as an AI Engineer Intern from January to February 2026. During his time with our team, Keshav contributed to multiple AI and automation initiatives and demonstrated strong problem-solving ability, ownership, and technical maturity beyond his academic level.

Keshav worked on developing and integrating AI-driven workflows, data processing pipelines, and backend automation tools using Python-based technologies. He was responsible for implementing model-based features, improving data handling processes, and assisting in building internal tools that streamlined operational tasks. He quickly adapted to our development practices, collaborated effectively with remote team members, and consistently delivered assigned tasks on time.

One of Keshav's strongest qualities is his ability to independently research unfamiliar concepts and convert them into working solutions. He showed initiative in debugging production issues, optimizing code performance, and suggesting practical improvements to existing systems. He communicated clearly, asked the right technical questions, and handled feedback professionally.

Beyond technical skills, Keshav was reliable, proactive, and easy to work with. He handled responsibilities seriously and demonstrated a strong learning attitude, making him a valuable contributor to the team despite being early in his career.

I confidently recommend Keshav for internships or entry-level roles in Artificial Intelligence, Software Engineering, or Backend Engineering. I believe he will be a strong addition to any team that values curiosity, ownership, and practical engineering skills.

Please feel free to contact us for any further information.

Sincerely,

Peter Karavias - Founder/COO
